((Look for health in nature)) is the motto of our company, to find out that in a world which is captured by chemical pharmacology which looks nice and very effective but, causes a lot of side effects and hidden dangers for human beings. I have always been looking to find medicines which are most suitable and associated with man kind and I found that in nature and natural products. So I decided to follow what is the most friendly and favorable for the health. Lastly, In conclusion reaching the truth of nature' s secrets has always been my dream and my company has been looking for it each day.

Introduction

Darudarman selfchehan co is a Science-based company which is registered at companies and industrial ownership organization of Tehran under registration no.12957on 2001 and started working in 2002 after receiving licenses and certificates from legal authorizations such as environment organization, ministry of industry, health ministry and veterinary organization.

This company is one of the major producers with 16 years presence in producing human and veterinary products and plays an important role in enhancement of this industry in the country.

The Pharmaceutical Products are divided in to two main sectors of human and veterinary products and producing under strict observance of the rules of GMP and ISO with the latest international standards of BP, USP and EP for medicinal products.

Livestock and poultry production line running in two basic plants herbal and chemical plants.

Herbal products;

Liquid products (Different types of antibiotics)

Semi-solid products (ointments, creams)

Chemical products:

Skin products (antibiotics sprays and a variety of external usage solutions)

Powder products (different types of antibiotics)

And a variety of preventive solutions and dietary & treatment supplements.

The main purpose of the company is producing natural medicines on the herbals basis as a replacement for chemical medicine and research on the common diseases between human and animals.

The R&D team is made up of highly educated & experienced doctors, veterinarians, pharmacists and laboratory experts.

Total number of pharmaceutical products is 29 ,for human and veterinary drugs.

For the time being the company is distributing the products in the territory of Islamic republic of Iran as local market and has been succeeded to export to other countries such as Iraq, Afghanistan, Emirates, Syria, and Oman. Cis countries;Tajikistan, Turkmenistan and south east Asia region in Singapore and Malaysia.

Due to the good market and the potentiality of our company we are in the process of expanding our efforts through making new research centers for herbal medicines.

Certificates & Licenses:

GMP certificate from veterinary organization (I.V.O)

GMP certificate from I.IR Iran ministry of health (F.D.O. Food & Drug organization)

Production licenses

Free sales certificates.

History

2002: Darudarman co was established, (changing the name of Behdasht kat co) under registration no 12957.

2002: The first production started, acquiring the licenses from environmental organization, ministry of health, ministry of industry & mines.

2003: The production of povidon iodine & disinfectants started and nowadays we are the leading producer and supplier to Iran market and we are one of the 3 major suppliers to whole country.

2007: Spray filling machineries were installed & the production of OTC, CTC sprays as antibiotics for veterinary wounds of animals started.

2010: Started export of OTC, CTC sprays to neighboring countries.

2012: Started production of veterinary chemical medicines like: Tylosin tartrate, Katsal, Madukatacin, Neokat, Tylokatasol, Tylokat, Enro feloxacin, Doxycycline, Florfenicol.

2013: Started the new factory of Safadsht in Safadasht industrial zone to start the production of herbal medicines, especially herbal ointments consisting: joint pain, diabetic wound, bedsore, burn ointments.

2014: Production of other herbal ointments such as, anti-wrinkle, softener, moisturizer creams.

2015: Started production of hemorrhoid, vaginal, anti-fissure & rest of ointments.

2016: Started the office for export to south East Asia and started repacking of the products in Singapore & then shifted to Malaysia.

2017: Started the production of Haluma general (wound healing ointment) & anti acne-anti blemish ointments and also production of different kinds of Vaseline of different essences. The export of items expanded widely in neighboring countries such as Afghanistan, Iraq, Syria, Lebanon, Oman and south east Asia region like Malaysia, Singapore, Indonesia, etc.

2018: Started new company in Koln, Germany, under the name of Baimann to produce & repack the products under contract manufactory with European companies to start production & distribution there. The exports of all items are expanded & increases daily.

Vision

To make a difference in our lives through innovative herbal and natural medicines. we are committed to be in the premier, researches intensive pharmaceutical company. we are dedicated to provide leading innovations & solutions for today & future world's concerns.

To discover, develop & provide innovative products & services that save and improve lives of people around the world, using the most advanced technologies of the world.

For more than a decade, we have been inventing treatments of the most challenging diseases. Our one and only purpose of production has always been making life happier for people with the help of mother nature.

Laboratory + R&D

Research and development constitutes the first stage of development of a potential new service or the production process.

New product design and development is often a crucial factor in the survival of a company. In a global industrial landscape which is changing fast, firms must continually revise their design and range of products. This is necessary as well due to the fierce competition and the evolving preferences of consumers. Without an R&D program, a firm must rely on strategic alliances, acquisitions, and networks to tap into the innovations of others.

A system driven by marketing is one that puts the customer needs first, and produces goods that are known to sell. Market research is carried out, which establishes the needs of consumers and the potential niche market of a new product. If the development is technology driven, R&D is directed toward developing products to meet the unmet needs.

In general, research and development activities are conducted by specialized units or centers belonging to a company, or can be out-sourced to a contract research organization. In the context of commerce, "research and development" normally refers to future-oriented, long-term activities in science or technology, using similar techniques to scientific research but directed toward desired outcomes and with broad forecasts of commercial yield.

Darudarman Company using highly advanced laboratories and R&D team is specialized in the design, formulation and manufacture of any products which is assigned by the management of the company to be produced. Ranging from veterinary items to herbal medicinal ointments and commercial products. We are committed to make the best quality products on the market at prices and in quantities that suit customer's needs. Our in-house chemists are passionate about the formulas and insist on a product doing exactly what it says; the formula does the work that is supposed to. We are proud that our customers are the most important part of our business. We are continually listening to our customers and formulating new products to accommodate their problems, so they are tailor made.

"We are looking forward to cooperate with companies to create novel medicines to address difficult targets, and we believe this alliance will maximize the value of all and is very exciting and innovative.

Darudarman co is a pharmaceutical company focused on developing new strategies aimed at

Warehouse

Our factory warehouse is a 400 Sq/m salon, of which 100 Sq/m is allocated to quarantine warehouse. Warehouse for raw materials and others in 200 Sq/m of which 50 Sq/m is allocated to quarantine of raw materials. The quarantine warehouse of finished product is 42 Sq/m parallel to production line. Finished product warehouse in a place of 350 Sq/m separately designed in production salon the warehouse for wastage and recall is 40 Sq/m.

In all warehouses we use pallets for locating of packaging, raw materials and finished products.

Daily, two times of cleaning in the morning and evening, 30 minutes before start and ending will be done in the warehouses.

All entering materials to warehouses, like packaging materials and raw materials and finished products will be registered in special booklets and also exiting materials in a separate booklet are registered.

All consumable raw materials will be kept in a 25 degree centigrade, so while entering based on the received information from manufacturer of that material the know-how of keeping will be prepared.

At the beginning, while raw materials enter warehouse the laboratory responsible person takes samples and after laboratory approval the materials can exit, based on instructions given by factory management and technical manager instructions.

Warehouse manager is responsible for proper replacement of the materials based on entering date and simultaneity of entrance and should monthly report them to technical manager instructions.

After entrance of rejected from production line materials to the warehouse, a sampling and survey on documents happen and they compare with the proper materials and after reporting to technical factory managers, it will be demolished.

Export

Darudarman 's export position has steadily grown up over the years since its establishment .

In spite of a huge bureaucracy and sanctions against our country which slow down the exports, the effects have been very little to our company.

However, there is much to be learnt from the experiences of other companies that have adopted an outward-oriented perspective in their export drive. Drawing on existing knowledge, we have developed an export promotion framework that could be useful to our managers and policy makers. Nevertheless performing the experiences and export promotion policy , we have succeeded to export our products to a vast range of countries like: Azerbaijan, Malaysia,Singapore,Indonesia,Afghanistan ,Iraq,Germany,Syria,Usa,Oman.

DARUDARMAN SALAFCHEGAN

www.darudarmanco.com

Abukhalsa Ointment (Honey Derm)

Product Information:

Abukhalsa Ointment

Ingredients (main):

Sesame Seed Oil, ArnebiaEuchroma Extract, Bees Wax

Usage:

Treatment of burns grades 1 & 2 & 3

Pharmacological Effects:

The clinical results show that burn ointment has anti-inflammation, anti-bacterial, accelerating effects to speed up burn restoration and it is anti-scar.

Ointment Effects:

The presence of fatty acids in the sesame seed oil combining with the bees wax along with the effects of Alkanine and flavonoids existing in the herbal extract, increase blood supply and stem cell proliferation of the skin and speed up restoration of the damaged tissue which causes new formed dermal and expedite its natural elasticity. In addition, the effect of antibacterial and strengthening effects of the immune system, will affect to increase the blood flow at the burn area, beeswax creates an appropriate environment for the growth of the tissue, which directly interferes with wound healing. Unlike most of the drugs which nowadays are used in treatment of burn and through suppression of the immune system it control the inflammation, Burn ointment controls the inflammation without inflicting side effects and as a result it increases the speed and quality of the burn restoration.

Side Effects:

All ointments may have unwanted side effects. Although all these side effects are not likely to be seen in every one, you must consult with physician or pharmacist in case of any allergies or irritations arise. Possible side effect of this ointment is exanthema (topical small rashes) on the body, which must be consulted with physician if observed.

Dosage and administration:

The procedure of application of this ointment in different burned grades include as following:

- In grade 1 burn, it affects only the outer layer of the skin, i.e. epidermis and some degrees of redness and inflammation is observed on the skin. Rinse the affected area with normal saline serum. Use burn pad or burn ointment for wound dressing once in every 12 hours, repeat this process until wound is completely healed. This type of burn heals between 3 to 5 days on an average.
- In grade 2 burns which inflicts the epidermis and some part of dermal, possibly blister is seen. Separate the blister from the affected area and rinse the affected area with normal saline serum. Apply 2 or 3 millimeter ointment on the special material and apply it on the affected area. Preferably to use burn pad on this wound dressing. In this type of burn, never apply the ointment directly on the affected area. If there is no blister on the affected area, the wound should be treated similar to grade 1 burn. In grade 2 burn, require wound dressing to be changed every 24 hours. If infection observed in the affected area, then the treatment must be done in every 12 hours. An average duration treatment for this type of burn is between 10 to 15 days.
- In the grade 3 burn, it involves all skin thickness i.e. epidermis and dermal are damaged, the damage may even extend to the under skin tissues, similar to grade 2 burn, act on treatment and change the wound dressing once in every 24 hours until the infection is healed completely and the damaged tissues are restored. An average duration treatment for this type of burn is between 20 to 35 days.

Continue this process till the skin restores its own natural color and condition. Apply the ointment on the skin daily for one month.

Zaravand Ointment (Derma Heal)

Product Information:

Zaravand Ointment

Ingredients (main):

Aristolochia Extract, Bees Wax, Honey extract.

Usage:

Treatment for the diabetic wounds, ulcers and infected wounds on diabetic patients.

Pharmacological Effects:

Clinical results show that the ointment reduces inflation and accelerates the natural process of healing and prevents diabetic wound infection.

Ointment Effects:

Clinical results indicate that Aristolochia ointment reduces inflammation and accelerates the normal course of recovery and prevents diabetic wound infection. The effective ingredients in this ointment including Naphthoquinone compounds such as Alkanin, and phenolic compounds such as flavonoids are derived from antifungal, antibacterial, and anti-inflammatory agents. Antioxidants in the ointment cause free radicals to disappear, and play an important role in wound healing, preventing diabetic wound infections. The presence of honey wax in this element has a multifaceted effect on the healing of diabetic wounds.

Side Effects:

All ointments may have unwanted side effects. Although all these side effects are not likely to be seen in every one, you must consult with physician or pharmacist in case of any allergies or irritations arise. Possible side effect of this ointment is exanthema (topical small rashes) on the body, which must be consulted with physician if observed.

Dosage and administration:

Initial cleaning of the wound location with normal saline serum is advised. Cover the wound with enough ointment. Open the dressing after 48 hours and repeat the above-mentioned processes. Continue this process every 48 hours until the wound is completely healed.

Ghoruh Ointment (New Derm)

Product Information:

Ghoruh Ointment

Ingredients (main): Olive oil, Arnebia Euchroma Extract, Bees wax

Usage: Treatment of bedsore and infected wounds.

Pharmacological Effects:

Based on the conducted clinical researches, the following Pharmacological Effects have been known for the ointment:

- Infection and inflammation reduction
- Wound treatment and restoration
- Acceleration of tissue regeneration natural process

Ointment Effects:

According to the studies, fatty acids existing in olive oil contribute to skin regeneration, increase water supply and skin elasticity. The presence of effective ingredients in the formulation of this ointment such as different forms of Alkaline and flavonoids which have been extracted from arnebiaeuchroma extract involves anti-inflammatory, antioxidant, anti-fungal and antibacterial virtues which have a significant role in the wound healing process.

The presence of Bees Wax in the product directly interferes with the wound healing and prepares the environment for appropriate growth of tissue and wound restoration.

Side Effects:

All ointments may have unwanted side effects. Although all these side effects are not likely to be seen in every one, you must consult with a physician or a pharmacist in case any allergies or irritations arise. Possible side effect of this ointment is exanthema (topical small rashes/ pimples) on the body, which must be consulted with a physician if observed.

Dosage and administration:

- Rinse the area with normal saline serum, then cover the wound with an appropriate dosage of ointment (cavity wounds to be filled out completely with the ointment). After placing the prepared bedsore pad on the wound, bandage the area. Continue with this process once every 48 hours or 72 hours till complete healing.
- In cases in which the skin of the pressured area has become red and fervent, but still not ulcerated, massage the ointment on the skin surface at least once in a day.
- Regarding the features of the bedsore proportionate with the depth and width of the wound, it is better to consult with the experts and experienced individuals to get a decisive treatment. Conclusion (at treatment initiation of some wounds, it is necessary that the necrotic tissue [the dead skin and tissues] to be debrided by the experienced therapist of the wound).

Dohn Karas Ointment (Hemorrhoeal)

Product Information:

DohnKaras Ointment

Ingredients (main):

Sesame Seed Oil, Commiphora Mukluk Engl., MarrubiumVulgare.

Usage:

Treatment of the hemorrhoid soothing. Relief from painful burning itching discomfort.

Pharmacological Effects:

The ointment has strong anti-inflammatory, astringent and antiseptic effect which makes dilated and fervent vessels in the location of hemorrhoid return to their natural state and by increasing the blood supply in the location, facilitates damaged tissues restoration and treatment process of hemorrhoid.

Ointment Effects:

Resin compounds existing in Commemorator Mukluk Engl create astringent effects in the ointment which leads to constriction of the dilated blood vessels in the hemorrhoid location and decreases the pain and inflammation. The Rubidium Vulgate has also antibacterial and anti-inflammatory features and decreases bleeding.

Sesame seed oil has antioxidant and anti-inflammatory effects due to softening and high tissue absorption nature and increases the blood vessels elasticity feature. This feature helps to decrease inflammation and minimizing the size of inflamed blood vessels in anus canal.

Side Effects:

All ointments may have unwanted side effects. Although all these side effects are not likely to be seen in every one, you must consult with a physician or a pharmacist in case of any allergies or irritations.

Dosage and administration:

Use twice a day and each time 1 applicator through rectum. It is better to clean and rinse well the anus area with lukewarm water before using it.

Zangebil Ointment (Gingerol)

Product Information:

Zangebil Ointment

Ingredients (main):

Ginger (ZingiberOfficinale) Oil, Bees Wax, Olive (OleaEuropaea) Oil.

Usage:

Arthritis treatment, rheumatism, bones and joints pain and muscle spasms.

Pharmacological Effects:

Clinical and laboratorial studies show that ginger ointment includes the following virtues:

Treatment and healing of the joints Pain, muscle pain, rheumatism, local pain due to muscle cramps, Sciatica pain, damage to joints and bone losses and also Joint cartilage regeneration.

Ointment Effects:

Harnessing cyclooxygenase and lipoxigenase enzymes decreases the generation of leukotrienes and prostaglandins, as a result swelling and inflammation are eliminated, thus the pain is relieved and particular structures are protected and the blood flow in the area is improved, preserving the joint function. According to the conducted researches the anti-inflammatory effect of ginger is equal to the synthesis harnessing drugs. Thus, because of local application, this ointment lacks systemic side effects observed in edible consumption such as blood platelets decrease and intervenes with anticoagulant drugs.

Olive oil which has polyphenolic antioxidants activates pain resistant mechanisms.

Side Effects:

No precautions and toxicity cases have been reported as yet.

Dosage and administration:

Rub and massage the ointment around the appointed area 2 times a day and rub gently so that the contents of the ointment are absorbed well by skin. Then tie the area with an appropriate piece of material and rest the affected area.

Haluma Ointment (Wound Heal)

Product Information: Wound Heal Ointment

Ingredients (main): Arnebia Euchroma Extract, Rose Canina Oil, Bees Wax.

Usage: Treatment of all kind of wounds and scar prevention.

Pharmacological Effects: Clinical results show that Haluma ointment reduces inflation, accelerates the natural process of healing and has scar prevention effects on the wounds.

Ointment Effects:

According to studies, the active ingredients in the formulation of this ointment, such as the various forms of alkaline, and shikonin and flavonoids, have anti-inflammatory, antioxidant, anti-fungal, and antibacterial properties that have a significant impact on wound healing.

Haluma ointment directly interferes with wound healing and provides the environment for tissue growth. By increasing the viscosity of the wound, it prevents bacterial growth on the wound and prevents the formation of scar tissue.

Damask Rose Oil is known for its ability to relieve skin irritation. Essential fatty acids help improve the appearance of ulcers and skin spots. They also can induce skin regeneration, which helps to grow new skin and repair skin problems. Damask Rose Oil is the natural source of omega-3, 6, and 9 fatty acids that helps repair damaged skin while reducing the pain of the wounds. As a moisturizer, essential fatty acids improve the flexibility and permeability of the skin.

Possible Side Effects:

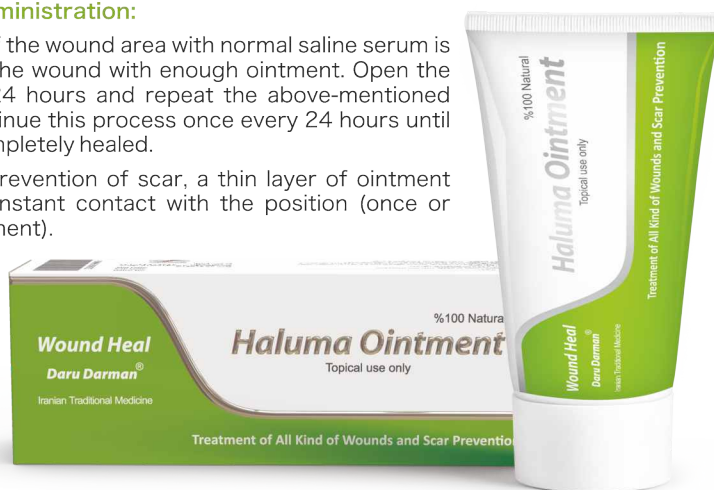

All ointment may have unwanted side effects. Although all these side effects are not likely to be seen in every one. You must consult with a physician or a pharmacist in case any allergies or irritations arise.

So far no side effect has been reported.

Dosage and administration:

Initial cleaning of the wound area with normal saline serum is advised. Cover the wound with enough ointment. Open the dressing after 24 hours and repeat the above-mentioned processes. Continue this process once every 24 hours until the wound is completely healed.

In the case of prevention of scar, a thin layer of ointment should be in constant contact with the position (once or twice in the ointment).

Anti-Fissure Ointment (Shifar)

Product Information:

Shifar Ointment

Ingredients (main):

Arnebia Euchroma Extract, Bees Wax, Olive Oil.

Usage:

Treatment of anus fissures, wounds and eliminating its symptoms.

Pharmacological Effects:

The ointment has anti-inflammatory, anti-bacterial and anti-fungal effects, which eliminate the inflammation and bleeding, completes healing of the infection and facilitate the defecation.

Ointment Effects:

The effectual substance of Alkaline, and flavoring presence in ArnebiaEuchroma extract, ensure anti-bacterial, anti-fungal and anti-inflammatory effects and also decreases inflammation in the fissure area. Honey has anti-bacterial effects, increases blood flow and strengthens the body immune system in the affected area, which causes the wound to heal faster. Existence of the olive oil in this ointment formulation has softening feature and added role in treatment.

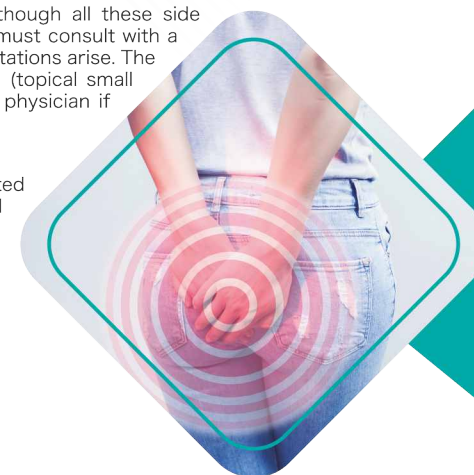

Using the ointment on affected area and sitting in warm water tub for 2 or 3 times a day, each time 10 to 15 minutes, improves blood supply and loosens sphincter muscle and contributes to its restoration.

Possible Side Effects:

All ointment may have unwanted side effects. Although all these side effects are not likely to be seen in every one, you must consult with a physician or a pharmacist in case any allergies or irritations arise. The possible side effect of this ointment is exanthema (topical small rashes) on the body, which you must consult with physician if observed.

Dosage and Administration:

Rub a thin layer of the ointment on the fissure's affected area twice a day. Clean and rinse the anus area well with lukewarm water before using it.

► Jaftebalut Ointment (Phytogenal)

The product is for topical use only

Product Information:

Jaftebalut Ointment

Ingredients:

Jaftebalut

Usage:

For Vaginal infections.

Application:

First open and fix applicator from bottom side to the end of the plastic joint, then fix all, to the tube shoulder top part, then press tube to fill up the applicator completely. Then push applicator to the vaginal place and press the applicator plunger to the end. Apply once a day.

Side effects:

No specific effects have been reported for this product.

► Abukhalsa Ointment (Sunny Derm)

The product is for topical use only

Product Information:

Abukhalsa Ointment

Ingredients:

Sesame Seed oil, Bees Wax, ArnebiaEuchroma Extract.

Usage:

Relief and soothing skin sunburn.

Application:

Use 1 to 2 times daily on affected skin area.

Side effects:

No side effect has been reported.

Multipurpose Skin Cream (Redrose)

Product Information:

Red Rose Ointment

Usage:

Softening of hands, feet and hangnails, lips and cracks.

Ingredients:

Sweet Almond Oil, Sesame Seed Oil, Olive Oil, Bees Wax, Pure Honey Extract, De-ionized Water, Ostrich Oil.

Ointment Effects:

Sweet Almond Oil which has softening and smoothing effects due to its nutritious substances, causes feeding and regeneration of the skin live tissue which prevents the tissue's premature aging and chopping.

Lanolin and wax create unique coating composition which files in the cracks and grooves. It impedes the loss of moisture to the skin and prevents skin chopping and controls other external factors like sunshine, chemicals, cold or heat. etc., and prevents from damaging the skin.

Anti Wrinkle & Rejuvenating Cream (Redrose)

Product Information: Red Rose Ointment

Ingredients: Olive Oil, Ostrich Oil, Bees Wax, Natural essence.

Usage:

The skin regeneration cycle activation

Reduction of superficial lines and wrinkles of the skin
Reduction of the skin blemishes due to aging
Prevention from premature skin aging.

Cream Effects:

Available natural materials in "Red- Rose" cream provide all the needed material of the skin (vitamin, amino acids, omega fatty acids, etc.) with high absorption percentage. Completely natural

materials being used to formulate this product and prohibit any chemical preservatives and fresheners. Using this medical cream will affect the regeneration of skin over time and will result in elimination of wrinkles and sagging.

The ostrich oil not only increases blood flow in the skin, it also contributes to regenerate and renew the damaged or atrophic parts of the skin cells due to its similarity and homogeneity with human fat.

The skin loses its capability of water reserving, elasticity and softness feature over time. The ostrich oil, with its high influence, aid to act as a replacement in the skin and causes to prevent the skin chapping and impede wrinkles appear on the skin.

Dosage and Administration:

Apply this product on skin, twice a day, once in the morning and once in the evening. You may use cosmetic creams a few minutes after using the product.

▶ Nappy Rash Prevention (Mum Derm)

The product is for topical use only

Product Information:

Nappy Rash Ointment

Ingredients:

Vaseline, Olive Oil, Lanoline, Henna Essence Oil.

Usage:

Relief baby's urine burns and napkin rash

Application:

Apply a thin layer on baby's clean skin 3 or 4 times a day.

Side effects:

No side effect has been reported.

Anti Blemish & Acne Scars Cream (Redrose)

Product Information:

Red Rose Ointment

Ingredients:

Olive Oil, Bees Wax, AHA, Bitter Almond Oil, Lanolin, Calendula Extract.

Usage:

- Reduce and remove blemishes and acne scars
- Lightens the skin

Pharmacological Effects:

The natural ingredients in the Red Rose Anti Blemish and Acne Scar Cream provide almost all the ingredients needed for the skin (vitamins, amino acids, omega fatty acids, etc.) with high absorption rate. In the formulation of this product, the material is completely natural and does not contain any preservatives or chemical fresheners. The use of this cream over time reduces and eliminates acne scars, brilliant and smooth skin.

Ointment Effects:

Red Rose Anti Blemish and Acne Scar Cream improves skin texture that gives it a more delicate appearance, reduces fine tough lines and sparkles skin and removes blackheads by mildly peeling.

The alpha-hydro acid used in the cream structure dissolves the inter cellular layer slowly, which causes the skin to become obsolete to the epidermis, resulting in the skin's outer layer brightening and can stimulate the production of collagen and elastic (two skin protecting agents). Alpha-hydro acids increase the ability of maintaining moisture in the skin, making it soft and firm.

It also prevents the accumulation of worn cells at the pores of the skin and prevents the formation of blackheads and sordid.

Dosage and administration:

Apply certain amount of cream twice a day on your skin and rub gently till full absorption.

Vaseline

Usage:

can be used on dry skin, stressed skin, and sensitive skin

Ingredients:

White petroleum jelly, Mineral oil (light & white), Paraffin USP, Allantoin, Isopropylmyristate, Bees wax.

Effects:

- provides dry skin relief and protects minor cuts
- clinically proven to help healing dry, damaged skin
- Made with 100% pure petroleum jelly. Purity is guaranteed with our triple-purified formula

Baby Vaseline

Usage:

Locks in moisture to prevent skin from diaper rash

Best for: diaper rash, sensitive skin, dry skin

Ingredients:

White petroleum jelly, Mineral oil (light & white), Paraffin USP, Henna oil extract, Bees wax, Aloe vera extract, Essence

Effects:

- Keeps your baby's skin soft, smooth and protected
- Locks in moisture and keeps out wetness, helping to treat and prevent diaper rash
- Gentle on skin, hypoallergenic and non-comedogenic (won't clog pores)

Fragrant Vaseline

Usage:

- Skin Care
- Relieve dryness from the skin
- E,A&D vitamins in this Vaseline make it as a skin booster

Ingredients:

White petroleum jelly, Mineral oil (light & white), Paraffin USP, Bees wax, Isopropylmyristate, Essence

Effects:

- Skin Booster for containing, A & E vitamins
 - Skin Moisturizer
- protect the skin in different kinds of climate

▶ Toothpaste with active peppermint, charcoal

Ingredients:

Sorbitol, silica, Peppermint Essence, Active charcoal, Aloe vera extract, Tea tree oil, Polyethylene glycol, Cinnamon extract, sodium carboxy methyl cellulose, Sodium dodecyl sulfate, Neem extract, Sodium monofluorophosphate, Calcium Carrageenan, Calcium glycerophosphate, Sodium benzoate, Sodium silicate, Saccharin, Dionized water.

▶ Toothpaste with cool peppermint

Ingredients:

Sorbitol, silica, Peppermint Essence, Clove anti bacterial essence, Licorice essence, Polyethylene glycol, Cinnamon extract, sodium carboxy methyl cellulose, Sodium dodecyl sulfate, Neem extract, Sodium monofluorophosphate, Calcium Carrageenan, Calcium glycerophosphate, Sodium benzoate, Sodium silicate, Saccharin, Dionized water.

▶ Toothpaste with active neem, licorice, clove

Ingredients:

Sorbitol, silica, Peppermint Essence, Clove anti bacterial essence, Licorice essence, Polyethylene glycol, Cinnamon extract, sodium carboxy methyl cellulose, Sodium dodecyl sulfate, Neem extract, Sodium monofluorophosphate, Calcium Carrageenan, Calcium glycerophosphate, Sodium benzoate, Sodium silicate, Saccharin, Dionized water.

Povidone Iodine

Packing:

in polyethylene containers of 3800 , 1000 , 250 ,60 ml

Sanitizing surface injuries , burns of the second and third grade,scratches , sanitizing skin and surgical locations before and after the procedure , sanitizing skin at injection.

Instructions:

Use the solution on the right spots without diluting and clean up the excessive solution before dressing the injury.

Surgical Scrub

Each 100 ml contains Povidone Iodine 7.5g of Fast acting, broad spectrum microbicidal, cleanser against gram-positive and gram-negative bacteria, fungi, protozoa and viruses. It is indicated for hand hygiene, surgical hand-scrubbing and topical of patient's skin.

CTC

Indication:

The CTC can be used for treatment of wounds, secondary infection caused by ecto-parasites and used after all surgeries such as laparotomy, castration, dehorning and etc.

Administration:
